## Introduction

### Gates Belt Drive Systems — No. 1 Choice of Industry

It is a fact that Gates belt drive systems offer more advantages — the best value — than any other method of power transmission. The overwhelming popularity of Gates drive systems today can be attributed largely to the outstanding global role of The Gates Rubber Company.

In 1917, Gates designed and produced the first rubber-and-textile belt. This event marked the beginning of a momentous era in which Gates has led the industry in a continuing program of developing new belts and improving existing belts in anticipation of industry's needs.

Through the years, Gates continues to make significant strides in specialized research, product development, testing and overnight availability of power transmission products.

Gates knows that even with the strongest product line in the business, we are only as good as our distributors. They are our most vital link with all the customers in their service area.

### How Our History Affects Your Future

Gates belts are the No. 1 choice of industry thanks to our aggressive policy of product innovation, improvement through research and development and worldwide product availability.

| <p><b>1959</b> A revolutionary new V-belt — Super HC® — was developed and produced by Gates. This V-belt handles the complete range of drive horsepower requirements with three narrow cross sections instead of the five regular cross sections needed for conventional heavy-duty V-belts.</p> <p><b>1965</b> The PowerBand® Belt was introduced. For the first time, industry was given an effective solution to the costly and annoying problems of belt whip and turnover, which can happen on pulsating or shock-load drives, particularly in oil field applications.</p> <p><b>1974</b> Gates came out with its new Hi-Power® II (successor to Hi-Power) V-Belts and PowerBand Belts — with a 20.8% to 48.6% increase in horsepower based on popular electric motor speeds and sheave diameters.</p> <p><b>1975</b> Tri-Power® Molded Notch V-Belts were added to the Gates line. Gates entered the rapidly developing Timing Belt field. We introduced the first in the line of top-quality synchronous belts.</p> <p><b>1977</b> Gates produced the Super HC Molded Notch V-Belt. It still provides extra high capacity and allows the use of smaller diameter sheaves for energy and weight savings.</p> <p><b>1980's</b> Gates came out with a V-ribbed belt later to be known as the Micro-V® Belt. Today's Micro-V Belt is superior to other V-ribbed belts due to the exclusive truncated V's. This unique feature increases flexibility, reduces heat buildup, and performs at extra high speeds on smaller diameter sheaves.</p> <p><b>1986</b> We further strengthened our position as the world leader in the manufacture of all belts, including synchronous belts, by acquiring the Uniroyal Power Transmission Company. That same year, Gates produced the revolutionary Poly Chain® GT® Belt for</p> | <p>its synchronous line, — a practically maintenance-free belt lasting up to five times longer than problem roller chain drives. One year later, Gates pioneered the Polyflex® JB® Belt, which transmitted higher loads at higher speeds in less space.</p> <p><b>1991</b> Gates became a metal manufacturer by creating a Manufacturing Strategic Alliance (MSA) with Dodge, a subsidiary of Reliance Electric. Through this alliance, Gates offers the most complete line of belt drive system components.</p> <p><b>1993</b> Gates introduced the new PowerGrip GT® belt. PowerGrip GT belts are the quietest belts available in the market today.</p> <p><b>1995</b> Predator® PowerBand belts were introduced for tough, heavily shock-loaded applications in the oilfield, sand and gravel, pulp and paper industries.</p> <p><b>1997</b> Gates used its 30 years of experience in European metric V-Belt production to introduce Metric Power™ V-Belts in the United States.</p> <p><b>1999</b> Gates revolutionary Vextra® construction was introduced for longer life in bandless V-belts.</p> <p><b>2000</b> Gates redesigns its synchronous belt offerings to provide higher horsepower ratings and new sizes to meet the needs of more applications. New constructions include PolyChain® GT® 2, PowerGrip® GT® 2 and Twin Power® PowerGrip® GT® 2.</p> <p><b>2001</b> Gates introduces the specialty line of V-belts for power turns on conveyors, called Power Curve™ belts.</p> <p><b>2002</b> Gates begins production of Vextra® construction Metric Power™ V-belts.</p> |

## GATES POWER TRANSMISSION

### THE WORLD'S BEST BELT DRIVE SYSTEMS AND A WHOLE COMPANY BEHIND THEM

Whether it's an OEM design, a replacement belt, a drive system upgrade or a problem to be solved, Gates provides more quality products, expert support and productivity improvement tools than anybody in the business. Beginning with the invention of the V-belt in 1917, Gates continues to lead the industry with a long list of innovations and unmatched customer support that improve power transmission (PT), positioning and motion control performance, efficiency, reliability and economy. It all adds up to value – the Gates difference.

#### **Gates Powered Solutions**

When you choose Gates, you get more than the strongest, most advanced PT product line. Behind our industry-leading synchronous and V-belt drive systems is an entire company of PT professionals – armed with solutions. From expert field sales representatives and application engineers to full-time troubleshooters and knowledgeable local distributors. Gates offers the kind of support that leads to trust and value. That's why Gates is *The Driving Force in Power Transmission*.

# GATES SUPPORT IS THERE WHEN YOU NEED IT

The unmatched support behind our products sets Gates apart from competitive brands. Our people offer complete solutions, solve problems and deliver service. It's support you can count on. Without question.

## **Application Engineering Assistance**

Designing the right drive is a complex proposition, affecting everything from performance to lifetime cost – and ultimately, the overall value of the drive investment. Gates Product Application (PA) Engineers are here to help. They work with end-users and distributors to develop best-value drive solutions and solve problems. They're available every business day at 303-744-5800. Call on them for answers to questions, help in selecting drive components or for an immediate problem solution. When necessary, they'll visit your site to assist in resolving particularly difficult challenges.

## **Experienced, Award-winning Field Sales Representatives**

Their title is District Sales Manager. But these Gates professionals represent far more. They are the Gates interface between the company and our customers. All are experienced in the PT field. Their strengths include a thorough understanding of the latest technologies, extensive drive design expertise and problem-solving capabilities. If you're looking for a solution, come to Gates.

## **Local/National Distribution Network**

Gates understands that even with the best product line, we're only as good as our authorized distributor partners. And we have the best network in the business. Gates distributors are the vital link between Gates and the users of our PT products. They have in-depth knowledge of Gates PT products, maintain local inventories for timely delivery, provide belt drive training and education and assist customers in drive design and component selection.

## **Global Manufacturing Quality and Consistency**

No matter where in the world Gates PT products are made, one thing is sure: We deliver uncompromising, unmatched quality and consistency. Applying the principles of proven business concepts such as Lean Manufacturing, Six Sigma and ISO 9000, we continually implement ways to improve processes, reduce waste, enhance productivity and develop more precise manufacturing techniques. This approach has made Gates the PT value leader worldwide.

### **Education and Training**

A belt drive may look simple, but there's a lot to know to obtain the best performance, life and value. Gates education and training programs cover it all. Programs include basic and advanced training on belt drive systems and drive design, our exclusive Belt Drive Preventive Maintenance and Safety

Seminars and custom programs tailored for specific industries. All are available for distributor and customer employees – on site and at no charge. Gates also offers “distance learning” via the Internet on topics ranging from drive design to belt maintenance.

### **Product Development and Testing**

Gates is at the forefront in introducing new technologies and uses for belts as well as improving existing products and systems. Our R&D engineers continually evaluate new chemistry, materials and construction to enhance performance and value. Multiple tests verify everything including

product life, strength, heat/cold capability, chemical resistance, stretch and many other important characteristics. Production run belts are stringently tested at the manufacturing facility for quality. Bottom line: You can be confident that Gates drives will work the way they're designed to work.

### **Made To Order Belts and Metals**

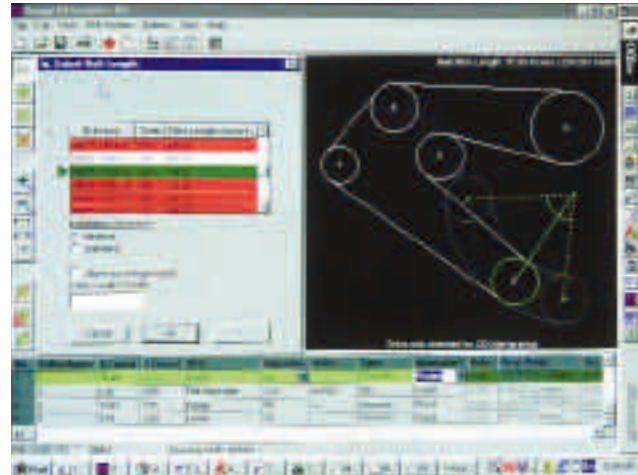

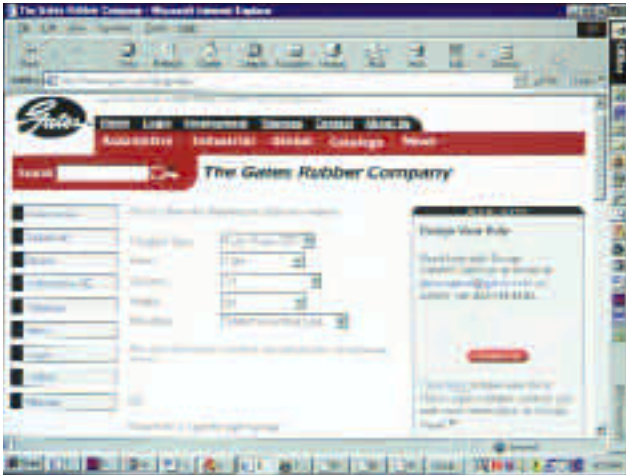

When off-the-shelf products won't meet your needs, call on Gates to provide prototype and production pulleys, sheaves, sprockets and belts to meet

your design specs. If you can design it, Gates can make it – in quantities from one to a million. We even offer engineering assistance in the search for a unique application solution. For more info, call 800-709-6001.

## TOOLS TO MAKE THE JOB FASTER, BETTER, LOWER COST

Whether driven by people, equipment or technology, Gates provides a wide range of tools to optimize PT performance and deliver the best value to customers in return for their investment in Gates products.

### Software Design Suite

The often time-consuming task of designing the right belt drive system is made faster, easier and more accurate with Gates free software programs. These tools enable engineers, designers and specifiers to do in minutes what used to take hours or days.

**Design Flex®** – This powerful drive design program lets you input V-belt or synchronous belt drive design parameters and within seconds generate multiple solutions. It even calculates payback time and energy efficiency. You choose the design that best fits your needs. Download a copy from the Gates Web site at [www.gates.com/designflex](http://www.gates.com/designflex).

**Design View™** – A fast, easy way to obtain engineering drawings of Gates synchronous belt drive sprockets. Accessed online, the program provides 2-D drawings that can be downloaded in AutoCad (.dwg), Word (.doc), Generic (.dxf) and Web (.dwm) formats. Save hours in the design process.

**Design IQ™** – Similar to Design Flex, this program provides comprehensive specification design of multi-point serpentine drives, including changing load conditions. Another time-saving tool from Gates.

### Gates Plant Survey

Local Gates representatives will visit your plant location to conduct an evaluation of belt drive performance. Every drive in the plant is inspected to determine the status of components. Drive operating conditions are analyzed, including alignment and belt tensioning. Information is

gathered on application requirements and a drive design program is developed to optimize all drives. The goal is to design a better PT or motion control system, drive by drive, enhancing performance and value for your overall operation – all at no cost to you.

### Preventive Maintenance and Safety Program

Optimum belt drive performance and value require proper maintenance and safety practices. Inspection and replacement of belts and drive components before they fail, combined with safe procedures, reduces costly downtime and production delays, resulting in trouble-free operation and better overall value. Gates offers the industry's most effective maintenance and safety program to save you time and money while creating a safer operating environment for employees. Our free seminars and detailed manual cover it all, step by step.

### UPC Bar Codes

All Gates industrial belts come with a UPC bar code on the box, belt sleeve, or on our new belt bar code tags. Bar codes make receiving, inventory control, product identification and belt replacement faster and easier. Codes meet global standards and UCC/EAN specifications. Each tag includes a removable identification sticker, with part number, that can be placed on equipment for easy and timely replacement ordering.

### EZ Align™

#### Laser Alignment Tool

EZ Align enables precision drive alignment to help prolong belt and pulley life, reduce vibration and belt noise and decrease downtime. Using reflected laser line technology, it quickly identifies any misalignment. Lightweight and portable, EZ Align works on synchronous or V-belt drives with center distances of up to six feet.

### gates.com

A valuable resource for Gates distributors and customers is our powerful Website – gates.com. A wealth of information and tools is available free of charge. Use the Vextra® Savings Calculator to quickly determine savings that can be achieved using our Vextra V-belts. Check out GatesFacts® technical library for selection, maintenance and replacement of PT products. Review and/or download electronic catalogs and design manuals and the latest version of Gates drive design programs. Join PT Talk, an online open discussion of PT issues. Visit soon.

### Belt Tension Testers

Improper belt tension, high or low, can cause expensive drive problems. Today's high power capacity belts require more than an "educated thumb." Gates offers a variety of tension gauges for easy, accurate measurement and adjustment on V-belt and synchronous drives. Proper tensioning will extend belt life, contribute to less wear on drive components and reduce costly downtime.

## HARD WORKING, HIGH PERFORMING SYNCHRONOUS DRIVE SYSTEMS

Synchronous belt drives are used more extensively than ever for the transfer of power from one shaft to another, multiplication of torque, speed reduction or increase, and synchronization of shaft operations. Low speed, high speed or any speed in between, Gates has total synchronous belt drive solutions for power transmission, positioning and motion control.

The latest innovations in Gates synchronous drive systems are two redesigned and reengineered belt and sprocket lines. They are the clear winners in overall cost, drive selection options and performance when compared to any other belt drive or roller chain products on the market today.

### **Poly Chain® GT<sup>2</sup>**

The optimal choice in meeting your needs for low-speed (below 500 rpm), high-torque drive applications. The powerful Poly Chain GT2 polyurethane belt drive system will outperform roller chain drives and any rubber belt drive system on the market today, delivering the lowest-cost belt drive system available for low-speed, high-torque applications.

Among the many benefits of Gates synchronous belt drive systems:

*Reduced downtime*

*Reduced overall drive cost*

*Reduced drive package size*

*Increased component life*

*Increased performance*

*Energy savings*

*Reduced acquisition costs*

*Reduced transaction costs*

*Increased drive design options*

**PowerGrip® GT²**

The performance choice for a wide variety of high-speed (above 500 rpm) drive applications. Developed using Gates design criteria to eliminate the waste of over-engineering, PowerGrip GT2 drives will deliver more power at a lower overall cost than any other rubber synchronous belt drive system available.

# INNOVATIVE V-BELT DRIVE SYSTEMS FOR EVERY APPLICATION

Gates made the very first V-belt in 1917. Decades later, we're still the leader in the field with the broadest array of V-belts, sheaves and bushings – all designed, engineered and manufactured through the application of Gates advanced technologies.

## Problem-solving V-Belts

Over the years, Gates has developed a variety of V-belt solutions for specific application requirements. These include PowerBand® belts that tie two or more strands together to give extra strength and to handle extreme shock loads. Micro-V® belts are specifically designed for small diameter pulleys with backside idlers. If you have a problem, Gates makes a hard-working belt that provides the solution.

## Specialty V-Belts

A wide variety of specialty applications require specialty belts, like flat or round belts. And Gates has them. With products like Speedflex®, Polyflex® PowerCurve™, Power Cable™, Tube Winder, Easy-Splice and Nu-T-Link, Gates V-belts get as specialized as any application.

### V80® Matching System

When it comes to matched belts, there's little room for error. A tiny fraction of an inch can make or break a belt drive. This system from Gates makes it easy to identify matched belts. All Gates belts

carrying the V80 logo are manufactured to exceed RMA matching standards. V80 belts of the same size and type will provide a perfect match – every time. Belts currently available in the Gates V80 system include Hi-Power®, Super HC®, Tri-Power® and Metric Power™.

### Vextra® Construction

There's never been anything like Vextra, a unique belt construction that increases service life up to 33% by eliminating stretch and elongation problems. Available in Gates Tri-Power and Super HC molded notch belts. Vextra technology is based on a pro-

prietary, oil and heat resistant, static conductive rubber material that eliminates the need for cross cord. Incorporating a uniquely engineered tensile member, Vextra construction provides an unbeatable combination of flex and load carrying capacity, reduced stretch and incredible cord adhesion. It all adds up to less drive maintenance and more uptime.

### Narrow V-Belts

To save space, weight and dollars, Gates Super HC® and Super HC molded notch belts are the choice. These narrow belts, with concave sidewalls, transmit higher horsepower for applications requiring high speeds, high speed ratios or small sheave diameters.

### Classical V-Belts

These Gates belts, including Hi-Power® II and Tri-Power® molded notch belts, are the best choice for classical, conventional drive applications. Featuring precision-machined sidewalls, they're designed for long service life, even in heavy-duty operating conditions.

### Metric Power™ V-Belts

This belt line provides the benefits of Gates V-belt technology for users in the United States who require metric sizes. Available in narrow and classical construction, they're

also available on a made-to-order basis in variable speed sizes. Metric Power belts add a new dimension to the Gates V-belt product offering.

## PUT GATES TO WORK ON YOUR APPLICATIONS

Rugged, heavy-duty environments or precision equipment. Low-speed or high-speed operation. Low-torque or high-torque requirements. V-belt or synchronous drives. For power transmission, positioning or motion control. Whatever and wherever the need, you'll find Gates PT belt drive systems at work in applications across a broad range of industries – always adding optimal performance, reliability and value to the process.

## POWER YOUR PROCESS WITH GATES SOLUTIONS

When compared to the constant lubrication problems associated with chain drives, or the mechanical problems and high costs of gear drives, belt drive systems are the logical, cost-effective means of power transmission, positioning and motion control. And nobody knows more about belt drives than Gates.

Whether it's a synchronous or V-belt application, Gates has the products, the support and the tools to make it work better, longer and at a lower overall cost.

Whatever *your* challenges are, Gates has the solutions. Contact your Gates representative today.

## General Information

### AIRCRAFT POLICY

WARNING! BE SAFE! Do not use Gates belts, pulleys or sprockets on aircraft propeller or rotor drive systems or in-flight accessory drives. Gates products are not designed or intended for aircraft use.

### Dimensions

Gates reserves the right to make changes in design or dimensions of standard products to improve their quality or to accommodate improved manufacturing techniques. All dimensions in this catalog are for reference only.

### Weights

All weights are close approximations and may vary slightly from actual weights.

## Glossary

### Ordering Terminology

**Customer Pack** — “Customer pack” quantities are listed for Super HC®, Super HC Molded Notch, Hi-Power® II, Tri-Power®, Power Cable®, Truflex®, and PoweRated® belts. These quantities are 1, 5 or 10. Products with a customer pack of 1 are inventoried in bulk; these products are not individually boxed.

**NOTE:** Customer pack quantities are not available for synchronous belts.

**Made-To-Order (MTO) Belt and Metal Products** — MTO products require production lead time and minimum production quantities. Check with Customer Service for details.

**PBL** — “Private Brand Label” of Gates standard line belts. Available upon customer request. PBL products are made-to-order and may require additional lead times and cost.

**Standard/Non-Stock Belt Products** — These products do not require minimum production quantities but may require production lead time. Check with Customer Service for details.

**Standard/Non-Stock Metal Products** — These products do not require minimum production quantities but may require production lead time. Check with Customer Service for details.

**Stock Belt Products** — Products in this Catalog are stock unless otherwise noted.

### Belt Products Terminology

**Aramid Tensile Members** — Available in several stock lines and on an MTO basis. They are also referred to as Kevlar\* or Fleten\*\*.

**Arched Top** — Construction feature which provides superior strength to prevent distortion of the tensile section.

**Banded Belts** — Belts with a fabric cover over the belt body. They are also referred to as wrapped or covered belts.

**Bandless Belts** — Belts with no fabric cover. They are also referred to as cut edge, raw edge or machined edge.

**Bareback Belts** — Belts manufactured without rubber material being applied to the outside surface of the banded belt. They are also known as low friction, dry cover or clutching cover.

**Belt Body** — The main part of any belt that generally surrounds, supports and protects the load-carrying tensile cords.

**Compounds** — Mixtures of rubber, plastics and other materials which are used to form the body of the belt.

**Concave Sides (U.S. Patent 1813698)** — Construction which allows belt to make uniform contact with sheave groove, thus distributing wear uniformly.

**Datum Diameter** — A system which defines specific sheave and belt dimensions, previously known as the pitch system (diameter or length) for classical belts and sheaves.

**Effective Length (E.L.)** — A standard length measurement that accounts for varying construction and manufacturing methods in the industry. The length is determined by adding the effective circumference to twice the measured center distance using sheaves and an applied tension specified by the RMA.

**Flex-Bonded Cords** — Strong chemical bond between rubber body and tensile cord. Allows for absorption of bending stress and long service life. Avoids premature failure due to cord separation.

**Flex-Weave™ Cover** — Patented nylon and cotton blended fabric construction which increases flexibility and reduces cover stress providing longer cover life and longer protection of belt core.

**Gates Curves** — Belts with this feature compensate for effects that occur when a V-belt bends in a sheave. Curved belts feature concave sides, radius relief and arched tops.

### Glossary (continued)

#### Belt Products Terminology (continued)

**Hi-Power® II Belt** — Gates trade name for belts commonly referred to as classical, wedge or conventional.

**Idler** — 1) a non-powered pulley, sheave, sprocket or wheel around which a belt travels. 2) a non-powered roll or rolls supporting a belt.

**Metric Power™ Belt** — Gates trade name for molded notch, narrow and classical section V-belts in metric sizes.

**Micro-V® Belt** — Gates trade name for belts commonly referred to as V-ribbed, multi-rib and Poly-V†.

**Molded Notch Belts** — Often referred to as cogged, notched or cut notch belts. Notches reduce bending stress.

**Multi-Speed** — Gates trade name for products commonly referred to as variable speed, wide range variable speed, adjustable speed and variable pitch.

**Oil and Heat Resistance (OHR)** — Property of the belt which allows it to withstand the affects of oil, heat, sunlight, ozone, weather and aging.

**Outside Circumference (O.C.)** — The circumference (total length) measured around the outside of the belt, typically with a tape, while the belt is still on the drive. This measurement can be used to determine the closest belt length when a part number is not available.

**Poly Chain® GT® Belt** — Gates trade name for a premium, high torque, polyurethane, synchronous belt with aramid tensile cord.

**Polyflex® Belt** — a Gates trademark for a polyurethane V-belt which is often used in high precision drives, such as machine tools and small appliances.

**Polyflex® JB® Belt** — a Gates trademark for two or more joined polyurethane V-belts.

**PowerBand® Belt** — Gates trade name for two or more belts joined together at the top of the belt. It is also referred to as a joined or banded belt.

**PowerGrip® Belt** — Gates tradename for several synchronous product lines including timing, HTD®, GT®2 and twin power.

**PowerRated® Belt** — Gates trade name for a line of premium fractional horsepower belts.

**PowerGrip® HTD®/GT®2 Belt** — Gates trade name for a high-torque drive system with a curvilinear tooth profile. These belts are often referred to as Gilmer, timing, positive or synchronous belts. They are sometimes referred to, in error, as cogged or notched belts.

**Predator® Belt** — Gates trade name for the most aggressive PowerBand V-belt made for shockloaded applications. Predator belt construction is available in narrow and classical profiles.

**Radius Relief** — Construction which minimizes corner wear and works with concave sides to assure proper support of the belt.

**Super HC®/Super HC® Molded Notch** — Gates trade name for a drive system commonly known as narrow or deep wedge.

**Superior Length Stability** — Assures V-belts require less retensioning and take-up during their service.

**Synchronous** — Generic term used for power transmission drive systems utilizing toothed belts in mesh with grooved pulleys or sprockets. These systems are also referred to as Gilmer or timing.

**Tensile Cord** — V-belts typically use special polyester cords, with aramid used in some specialty belts, such as Power Cable and PowerRated belts. Synchronous belts generally have fiberglass cords, except for the aramid fiber used in Poly Chain GT belts. Steel is rarely used, except in some special or Made-to-Order synchronous belts.

**Tooth Facing** — Specially woven and treated nylon fabric that reduces friction of the belt in the sprocket and resists abrasion and other tooth damage.

**Tri-Power®** — Gates trade name for molded notch classical section or conventional belts.

**Truflex®** — Gates trade name for Fractional Horsepower (FHP) light duty belts.

**Truncated Rib** — Construction profile which provides improved crack resistance, higher load-carrying capacity and improved flex fatigue resistance.

**V80®** — Gates trade name for V-belt matching system that meets RMA tolerances. Any V-80 belt will match and perform with any other V-80 belt of the same size and type.

The following Super HC, Hi-Power II and Tri-Power belts are V80 belts:

#### Power Transmission Metal Terminology

**Bushings** — A hub system that allows adaptation of sheaves, pulleys and sprockets to varying shaft sizes. Common bushing systems offered by Gates are QD and Taper-Lock\*.

**Pulley** — A common term which usually refers to sheaves, sprockets or pulleys. The term correctly used applies to metal used for PowerGrip timing belts.

**Sheaves** — Metal products with “V” shaped grooves specially designed for various types of V-belts.

**Sprockets** — Metal products for high torque synchronous power transmission systems, such as PowerGrip HTD and Poly Chain GT belts. Sprockets are specifically designed to transmit power with only the corresponding belt product line.

†Poly-V is a registered trademark of Goodyear Corporation.  
\*Taper-Lock is a registered trademark of Reliance Electric.

## Super HC<sup>®</sup> and Super HC<sup>®</sup> Molded Notch Belts

NARROW SECTION V-BELTS

### Markets/Applications

Suitable for all industrial applications, particularly where space, weight and horsepower capacity are critical.

### Features/Advantages

- Oil and Heat Resistant
- Narrow Construction
- Static Conductive
- Molded Notches\*
- Vextra<sup>®</sup> Construction\*
- Gates Curves\*\*

### Features/Advantages (continued)

- Flex-Bonded Cords
- Flex-Weave<sup>™</sup> Cover\*\*
- Machined Edge for Even Wedging\*

\*Molded notch belt feature

\*\*Banded belt feature

### How to Describe and Order

Specify the quantity required followed by the part number.

Gates Super HC V-Belts are available in 3V, 5V and 8V sizes. Gates Super HC Molded Notch V-Belts are available in 3VX and 5VX sizes up through 200 inches.

### Features/Advantages

- Oil and Heat Resistant
- Narrow Construction
- Static Conductive
- Molded Notches\*
- Vextra<sup>®</sup> Construction\*
- Gates Curves\*\*
- Flex-Bonded Cords
- Flex-Weave<sup>™</sup> Cover\*\*
- Machined Edge for Even Wedging\*
- High Stability
- No Side-Bending

\*Molded notch belt feature  
\*\*Banded belt feature

### How to Describe and Order

Specify the quantity required followed by the part number.

**For Example:**

<u>Quantity</u>	<u>Part Number</u>
10	5/5VX1400

The part number is constructed by placing the number of strands required followed by a slash (/) in front of the size. In the example above **5/** is the number of strands, **5VX1400** is the belt size.

Or, PowerBand belts may be ordered wider than five strands. See individual listing for maximum strand count by cross section and length. Super HC PowerBand belts with six strands or more are Standard/Non Stock.

**IMPORTANT:** Be sure to specify the name *PowerBand Belts* in your order so that it is not mistaken for an order for individual V-belts.

### Product No. Series 9385

#### 3V Section

3V PowerBand Belts are non-notched, and are raw edge construction for sizes 3V300 through 3V750. For sizes 3V800 and longer, these belts are banded (covered).

## Hi-Power® II PowerBand® V-Belts

### Markets/Applications

Suitable for all industrial applications requiring joined belts to prevent span stability problems.

### Features/Advantages

- Oil and Heat Resistant
- Static Conductive
- Gates Curves
- Flex-Bonded Cords
- Flex-Weave™ Cover
- High Stability
- No Side-Bending

### How to Describe and Order

Specify the quantity required followed by the part number.

**For Example:**

<u>Quantity</u>	<u>Part Number</u>
15	5/B66

The part number is constructed by placing the number of strands required followed by a slash (/) in front of the size. In the example above **5/** is the number of strands, **B66** is the belt size.

PowerBand belts may be ordered wider than five strands. See individual listing for maximum strand count by cross section and length. Hi-Power II PowerBand belts with six strands or more are Standard/Non Stock.

CLASSICAL SECTION V-BELTS

### Product No. Series 9092

Most "A" Section sheaves are a combination "A-B" groove. "A" Section PowerBands are not recommended for use in sheaves with "A-B" combination grooves. "A" Section PowerBand belts may be Made-To-Order and require minimum order quantities. Check with customer service for availability.

## Easy-Splice V-Belting

### How to Describe and Order (continued)

Easy-Splice is available in these standard cross sections:

**A-VO B-VO C-VO D-VO BB-VO**

corresponding to the A, B, C, D, and BB standard industrial V-belt cross sections.

How to Find the Correct Belt Length

1. Position the motor on its base so that the center distance can be shortened by the amount shown below:

<b>Easy-Splice Cross Section</b>	A-VO	B-VO	C-VO	D-VO	BB-VO
<b>Center Distance Allowance</b>	3/4"	1"	1 1/2"	2"	1"

2. After positioning the motor, use a flexible tape to measure around the outside of the sheaves. Subtract 1/2% from this measurement to provide enough tension for the belt.

3. From the length found in (2.) above, subtract the amount shown in the table below:

<b>Easy-Splice Cross Section</b>	A-VO	B-VO	C-VO	D-VO	BB-VO
<b>Subtract these Amounts</b>	0.90"	1.85"	2.26"	2.88"	1.00"

This corrects for the difference between **outside belt length** and **pitch length**, and compensates for the length of the fastener.

The result is the correct belt length to order for your drive.

Use the Correct Fastener for the Belt Section.

The fastener size depends on the belt section. Choose the correct fastener from table below:

<b>Easy-Splice Cross Section</b>	A-VO	B-VO	C-VO	D-VO	BB-VO
<b>Fastener Number</b>	A312	B437	C531	D750	BB4

**NOTE:** Easy-Splice Fasteners are not available from Gates.

### Markets/Applications

Suitable alternative to standard belts on all industrial applications and particularly suited to drives requiring connected belting for ease of installation.

### Features/Advantages

- Oil and Heat Resistant
- Dependable Non-slip Performance
- Outlasts Other Types of Open End Belting
- Minimum Stretch

## Speed-Flex® Flat Belts

### Markets/Applications

Suitable for all lightly-loaded, high-speed industrial applications requiring high speed ratios and/or small diameters.

### Features/Advantages

- Oil and Heat Resistant
- Static Conductive
- Long Belt Life
- Smooth Running
- Non-Slipping
- Flexible

### Gates Speed-Flex Belt Construction

### How to Describe and Order

Minimum order quantity is based on a sleeve width of 24" to 28". Belts from 15½" to 79.9" are built on 24" wide drums, and belts from 80" to 138" are built on 28" wide drums. Divide the drum width by the belt top width and round down to the nearest whole belt increment.

### Minimum Production Quantities

Minimum order quantities may apply. Check with Customer Service for Information.

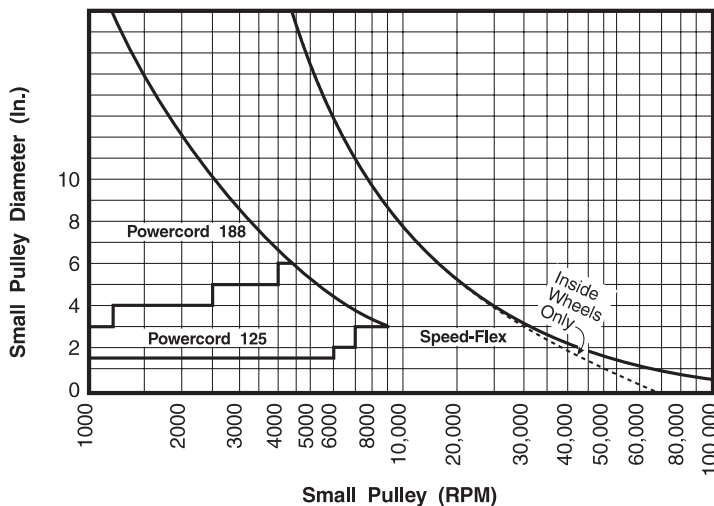

Refer to the Flat Belt Selection Guide (below) to make sure your drive falls within the operating range of Speed-Flex Belts.

NOTE: Gates Speed-Flex Belts are not recommended for use on flanged pulleys *unless the pulleys are crowned*. See your local Gates representative for information on proper crowning for Speed-Flex Belt installation.

### How to Describe and Order

Specify the quantity required followed by the part number.

The Polyflex JB Belt is designated by a four-part symbol consisting of: number of belt strands; cross section; effective belt length and the JB or joined band belt construction. For example, the belt 3/5M1000JB represents:

- A belt consisting of 3 individual belt strands joined together
- A 5mm top width for each belt strand
- An effective length of 1000 mm
- A Joined Band (JB) belt construction

Additional sizes may be available. Matched sets are available on a Made-To-Order basis. Contact Customer Service for information.

## Poly Chain® GT® 2 Belts

New Designs must utilize the Poly Chain GT2 Sprocket because of the high torque capacity of the Poly Chain GT2 Belt.

**WARNING:** Never utilize a QD type Poly Chain GT Sprocket when designing a new Poly Chain GT2 system that utilizes the Poly Chain GT2 horsepower rating tables. Poly Chain GT2 can be used on existing drives as replacement for Poly Chain GT.

### Markets/Applications

All industrial markets, but particularly suited to replace roller chain. When you want to bring overhung load (created by rubber belt drives) on a reducer into acceptable limits.

### Features/Advantages

- Acquisition Costs Reduced
- Transaction Costs Reduced
- Inventory Costs Reduced
- Eliminates Re-tensioning
- Replaces Chain Drives
- Lasts Longer than Chain
- Eliminates Lubrication
- Reduces Maintenance on Drives
- Reduces Labor Costs
- Resistant to Chemicals, Oils, Pollutants and Corrosion
- Exceptionally Durable
- Fully Operational in Temperature Extremes -65° F to +185° F (-54° C to +85° C)
- Light Weight
- Extraordinary Strength and Load Carrying Power
- Absorbs Shock & Surge Loading
- Offers More Design Options
- Greater Shear Strength
- Quiet Running

### Features/Advantages (continued)

- Compact Drive
- High Efficiency
- Metric Pitch
- Curvilinear Tooth

### How to Describe and Order

Specify the quantity required followed by the part number.

**For Example:**

**Quantity**                      **Part Number**  
**2**                                      **8MGT-1000-21**

Poly Chain GT2 belts and sprockets are made in a selection of sizes, capacities and dimensions.

The three principal dimensions of a belt are:

**pitch                      pitch length                      width**

Belt pitch is the distance in millimeters between two adjacent tooth centers as measured on the pitch line of the belt. Belt pitch length is the total length (circumference) in millimeters as measured along the pitch line. The theoretical pitch line of a Poly Chain GT2 belt lies within the tensile member.

Gates Poly Chain GT2 belts are made in 8mm and 14mm pitches. Using the information from these tables, a code for ordering a specific belt can be determined as shown in the following examples:

Belt Pitch (mm)	Belt Pitch Length (mm)	Belt Width (mm)
8MGT	640	12
14MGT	1190	37

POLY CHAIN GT2 BELTS

## 5MM Poly Chain® GT® Belts

### Markets/Applications

All industrial markets. Especially targeted toward machine tool, roller chain, compact drive requirements, small conveyors and where space is a problem.

### Features/Advantages

- Replaces Chain Drives
- Lasts Longer than Chain
- Eliminates Lubrication
- Reduces Maintenance on Drives
- Reduces Labor Costs
- Resistant to Chemicals, Oils, Pollutants and Corrosion
- Exceptionally Durable
- Fully Operational in Temperature Extremes -65° F to +185°F (-54° C to +85° C)
- Light Weight
- Extraordinary Strength and Load Carrying Power
- Absorbs Shock & Surge Loading
- Offers More Design Options
- Greater Shear Strength
- Quiet Running
- Compact Drive
- High Efficiency
- Metric Pitch
- Curvilinear Tooth

### How to Describe and Order

Specify the quantity required followed by the part number.

**For Example:**

**Min. Order Quantity**      **Part Number**  
95                                      5MGT-375-09

5MM Poly Chain GT belts must be used with 5MGT sprockets. Consult your local Gates Field Representative for drive design assistance. Current sizes are limited, check with Customer Service for your particular requirement.

5mm PolyChain GT belts require minimum order quantities and manufacturing lead times. Check with Customer Service for lead times.

The three principal dimensions of a belt are:

**pitch      pitch length      width**

Belt pitch is the distance in millimeters between two adjacent tooth centers as measured on the pitch line of the belt. Belt pitch length is the total length (circumference) in millimeters as measured along the pitch line. The theoretical pitch line of a Poly Chain GT belt lies within the tensile member.

Using the information from these tables, a code for ordering a specific belt can be determined as shown in the following examples:

Belt Pitch (mm)	Belt Pitch Length (mm)	Belt Width (mm)

Poly Chain GT belts and sprockets are made in a selection of sizes, capacities and dimensions.

The three principal dimensions of a belt are:

**pitch      pitch length      width**

Belt pitch is the distance in millimeters between two adjacent tooth centers as measured on the pitch line of the belt. Belt pitch length is the total length (circumference) in millimeters as measured along the pitch line. The theoretical pitch line of a Poly Chain GT belt lies within the tensile member.

Any Poly Chain GT belt must be run with sprockets of the same pitch and profile.

Gates Short Length Poly Chain GT belts are made in 8mm pitch. Using the information from these tables, a code for ordering a specific belt can be determined as shown in the following examples:

Belt Pitch (mm)	Belt Pitch Length (mm)	Belt Width (mm)

POWERGRIP GT2 BELTS

**PowerGrip® GT<sup>2</sup> Belts (continued)**

New drive designs must use the PowerGrip GT2 sprockets, because of the high torque capacity of PowerGrip GT2 belts.

**WARNING:** Do not use HTD or RPP\* profiled sprockets in new designs. PowerGrip GT2 belts can be used on existing HTD or HT100\*\* sprockets as replacement belts, usually at the next narrowest width.

**Markets/Applications**

- HVAC
- Textile
- Printing
- Laundry
- Pulp and Paper
- Saw Mill
- Machine Tools
- Compressors
- Centrifuges
- Food Processing
- Pumps
- Agriculture
- Packaging
- Conveyors

**Features/Advantages**

- Compact Drive
- High Power Density
- Low Noise
- Half the Width of HTD or PowerGrip GT Belts
- Economical Drive
- Non-Stretch
- Corrosion Resistant
- Direct Replacement for Many Curvilinear-Tooth Rubber Belts.
- Acquisition Costs Reduced
- Transaction Costs Reduced
- Inventory Costs Reduced
- 200% Rating of HTD/PGGT/RPP Belts
- Low Maintenance
- Abrasion Resistances
- Precision Registration

Reduce both your acquisition costs and transaction costs by designing with PowerGrip GT2. PowerGrip GT2 drive systems offer the largest selection of belts and sprockets in the industry. PowerGrip GT2 belts can be used as a direct replacement for most 1.0 and 1.5 rated 8 & 14MM Pitch Rubber Curvilinear synchronous belts at reduced widths.

**How to Describe and Order**

Specify the minimum order quantity followed by the part number.

**For Example:**

**Quantity**      **Part Number**  
**2**                **1600-8MGT-85**

PowerGrip GT2 belts and sprockets are made in a selection of sizes, capacities and dimensions.

The three principal dimensions of a belt are:

**pitch      pitch length      width**

Belt pitch is the distance in millimeters between two adjacent tooth centers as measured on the pitch line of the belt. Belt pitch length is the total length (circumference) in millimeters as measured along the pitch line. The theoretical pitch line of a PowerGrip GT2 belt lies within the tensile member.

Using the information from these tables, a code for ordering a specific belt can be determined as shown in the following examples:

Belt Pitch Length (mm)	Belt Pitch (mm)	Belt Width (mm)

### How to Describe and Order

Specify the quantity required followed by the part number.

Gates PowerGrip Timing belts are measured by:

**Length**— The length of a PowerGrip Timing Belt is shown in the first part of the belt designation. This first number is the pitch length in tenths of inches. A **300L075** is a belt 30.0" in pitch length.

**Pitch**— The pitch of a PowerGrip Timing Belt is the distance from center to center of the teeth (in inches). It is shown in the second part of the belt designation by a letter or letters.

Letters correspond to pitches as follows:

MXL = Mini Extra Light = 0.080" pitch  
 XL = Extra Light = 0.200" pitch  
 L = Light = 0.375" pitch  
 H = Heavy = 0.500" pitch  
 XH = Extra Heavy = 0.875" pitch  
 XXH = Double Extra Heavy = 1.250" pitch

A **300L075** belt is a belt with a 0.375" pitch.

**Width**— The width of a PowerGrip Timing Belt is shown in the last part of the belt designation. This last number indicates the width. A **300L075** is a belt 3/4" wide.

## Belt Tensioning and Alignment Devices

Improper belt tension, either too high or too low, can cause belt drive problems. An “experienced” thumb is not sufficient today with high power capacity belts, Gates recommends using a tension gauge. Proper tension and installation can extend belt life and reduce costly downtime. Some of Gates most popular tension testers include:

### Sonic Tension Meter

- A. Model 505C — Product No. 7420-0201**
- B. Model 305FD — Product No. 7420-0203**

For extremely accurate belt tension measuring, the Gates Sonic Tension Meter is an electronic device that measures the natural frequency of a free stationary belt span and instantly computes the static belt tension based upon the belt span length, belt width, and belt type. Both models can be used with all synchronous belts, Micro-V® belts and Polyflex® belts.

### Features:

#### Model 505C:

- Output readings can be switched between pounds, kilograms and newtons.
- Auto gain control automatically adjusts meter sensitivity.
- Auto frequency range filters for background noise.
- Frequency range from 10 - 1,000 Hz.

#### Model 305FD:

- Manually adjustable frequency range filters for background noise.
- RS-232 port outputs data to IBM-compatible computers.
- Frequency range from 10 - 5,000 Hz.
- Micro-adjustable gain control.

### C. Double Barrel Tension Tester

#### Product No. 7401-0075

Maximum deflection force: 66 Lbs. For use with all multiple V-belts and large synchronous belts.

### D. Kriket Gauges

#### Product No. and 7401-0072

For use with:  
Automotive V-belts

### Sonic Tension Meter and Accessories

### E. Five Barrel Tension Tester

#### Product No. 7401-0079

Maximum deflection force: 165 lbs. For use with multiple V-belts and large synchronous belts.

### F. Tension Tester (Pencil Type)

#### Product No. 7401-0076

Maximum deflection force: 30 Lbs. For use with all small V-belts and synchronous belts.

### G. EZ Align Precision Laser Alignment Device

#### Product No. 7420-1000

Identifies common types of pulley misalignment.

## QD Sheaves for Super HC® Belts

### Markets/Applications

For use with Super HC Belts

### Features/Advantages

- Full Split in Bushing allows Easy Installation and Removal
- Precise Sheave Design produces Positive, Press Fit to Shaft
- No Sheave Wobble
- Smaller, Narrower Sheaves
- Precision Manufactured
- Transmit Higher HP
- Static Balanced

### How to Describe and Order

Specify sheave quantity followed by Part Number (QD, number of grooves, / [slash], cross section and diameter).

For Example:

Quantity  
**50**

Part Number  
**QD4/3V6.00**

**NOTE:** Sheaves and Bushings must be ordered separately.

Do **NOT** use these sheaves with rim speeds in excess of 6,500 fpm.

LIGHT DUTY SHEAVES

## Taper-Lock\* Sprockets for Poly Chain® GT® 2 Belts

### Markets/Applications

Use with Poly Chain GT2 Belts or Poly Chain GT Belts.

### Features/Advantages

- Full Split in Bushing allows Easy Installation and Removal
- Precise Sprocket Design produces Positive, Press Fit to Shaft
- Smaller, Narrower Sprockets
- Save Shaft Space
- Load Closer to Bearing
- Extends Life of Reducer
- Keeps OverHung Load Below Manufacturers recommendation
- Quiet Operation
- Precision Manufactured
- Transmit Higher HP/Torque
- Static Balanced

### How to Describe and Order

Specify quantity required followed by the part number.

For Example:

**Quantity**      **Part Number**  
2                      8MX-22S-12

The three principal dimensions of a belt are:

**pitch number of sprocket grooves width**

On the sprocket, pitch is the distance between groove centers and is measured on the sprocket's pitch circle. The pitch circle of the sprocket coincides with the pitch line of the belt mating with it. The sprocket's pitch diameter is always greater than its outside diameter.

Sprockets for the Poly Chain GT2 belts are made in 8mm and 14mm pitches. The sprocket code symbol components are determined by using the following examples:

Pitch (mm)	Sprocket Designation and No. of Grooves	Width (mm)
8MX	48 S*	12
14MX	36 S*	20

\*The "S" is used after the number of grooves to help identify it as a sprocket and avoid any confusion with the belt code.

Abbreviations used for sprocket materials:

**GI = Gray Iron    DI = Ductile Iron    SiS = Sintered Steel**

Do NOT use these sprockets with rim speeds in excess of 6,500 fpm.

## Taper-Lock\* Sprockets for PowerGrip® GT<sup>2</sup> & Poly Chain® GT® Belts

### Markets/Applications

Use with PowerGrip GT2, PowerGrip GT or 5mm Poly Chain GT Belts.

### Features/Advantages

- Full Split in Bushing allows Easy Installation and Removal
- Precise Sprocket Design produces Positive, Press Fit to Shaft
- Smaller, Narrower Sprockets
- Save Shaft Space
- Load Closer to Bearing
- Quiet Operation
- Precision Manufactured
- Transmit Higher HP/Torque
- Static Balanced

### How to Describe and Order

Specify quantity required followed by the part number.

For Example:

Quantity      Part Number  
2                      P48-5MGT-15

### How to Describe and Order (continued)

The three principal dimensions of a belt are:

**pitch    number of sprocket grooves    width**

On the sprocket, pitch is the distance between groove centers and is measured on the sprocket's pitch circle. The pitch circle of the sprocket coincides with the pitch line of the belt mating with it. The sprocket's pitch diameter is always greater than its outside diameter.

Sprockets for the PowerGrip GT2 belts are made in 5mm, 8mm and 14mm pitches. The sprocket code symbol components are determined by using the following examples:

Pitch (mm)	Sprocket Designation and No. of Grooves	Width (mm)
5MGT	P56	15
8MGT	P48	20
14MGT	P36	40

Abbreviations used for sprocket materials:

**ST = Steel    GI = Gray Iron    SiS = Sintered Steel**  
**DI = Ductile Iron**

Do NOT use these sprockets with rim speeds in excess of 6,500 fpm.

## PowerGrip® GT<sup>2</sup> Sprockets

### Markets/Applications

Use with PowerGrip GT2 Belts

### Features/Advantages

- Precise Sprocket Design produces Positive, Press Fit to Shaft
- No Sprocket Wobble
- Smaller, Narrower Sprockets
- Precision Manufactured
- Transmit Higher HP/Torque
- Static Balanced
- Save Shaft Space
- Quiet Operation

### How to Describe and Order

Specify quantity required followed by the part number.

For Example:

Quantity      Part Number  
10              2MR-18S-06

### How to Describe and Order (continued)

Gates PowerGrip GT2 Sprockets are measured by:

- Pitch
- Number of grooves
- Width

**Pitch** – the distance from the center to center of the grooves. It is shown in the first part of the sprocket designation. A 2MR-12S-06 is a sprocket with a 2mm pitch.

**Number of Grooves** – The number of grooves of a PowerGrip GT2 sprocket (corresponding to the number of teeth on a gear or sprocket) is shown in the second part of the sprocket designation. A 2MR-12S-06 is a sprocket with 12 grooves.

**Width** – The width designation corresponds to the width of the widest belt that can operate in the sprocket. It is shown in the last part of the sprocket designation and is the width in millimeters. A 2MR-12S-06 sprocket is used with 6mm wide belts.

**Abbreviations used for sprocket bore:** MPB = Minimum Plain Bore

**Abbreviations used for sprocket material:** AL=Aluminum.

## PowerGrip® HTD® Sprockets

### Markets/Applications

Use with PowerGrip HTD Belts.

### Features/Advantages

- Full Split in Bushing allows Easy Installation and Removal
- Precise Sprocket Design produces Positive, Press Fit to Shaft
- No Sprocket Wobble
- Precision Manufactured
- Static Balanced

### How to Describe and Order

Specify quantity required followed by the part number.

#### For Example:

**Quantity**      **Part Number**  
**10**              **P24-3M-06AL**

Gates PowerGrip HTD Sprockets are measured by:

- Number of Grooves
- Pitch
- Width

### How to Describe and Order (continued)

**Number of Grooves** — The number of grooves of a PowerGrip HTD sprocket (corresponding to the number of teeth on a gear or sprocket) is shown in the first part of the sprocket designation. A **P10-3M-06AL** is a sprocket with 10 grooves.

**Pitch** — The distance from center to center of the grooves. It is shown in the second part of the sprocket designation. A **P10-3M-06AL** is a sprocket with a 3mm pitch.

**Width** — The width designation corresponds to the width of the widest belt that can operate in the sprocket. It is shown in the last part of the sprocket designation and is the width in millimeters. A **P10-3M-06AL** sprocket is used with 6mm wide belts.

Do **NOT** use these sprockets with rim speeds in excess of 6,500 fpm.

**Abbreviations used for sprocket bore:** MPB = Minimum Plain Bore (no keyway, no set screw).

**Abbreviations used for sprocket material:** AL = Aluminum.

PULLEYS

## PowerGrip® Timing Pulleys

### Markets/Applications

Use with PowerGrip Timing Belts.

### Features/Advantages

- Full Split in Bushing allows Easy Installation and Removal
- Precise Sprocket Design produces Positive, Press Fit to Shaft
- No Sprocket Wobble
- Precision Manufactured
- Static Balanced

### How to Describe and Order

Specify quantity required followed by the part number.

**For Example:**

Quantity	Part Number
2	TL20L075

Gates PowerGrip Timing pulleys are measured by:

- Number of Grooves
- Pitch
- Width

**Number of Grooves** — The number of grooves of a timing belt pulley (corresponding to the number of teeth on a gear or sprocket) is shown in the first part of the pulley designation. A TL20L075 is a pulley with 20 grooves.

### How to Describe and Order (continued)

**Pitch** — The distance from center to center of the grooves (in inches). It is shown in the second part of the pulley designation by a letter(s). Exactly as in the PowerGrip Timing Belts, letters correspond to pitches as follows:

<b>MXL</b> = Mini Extra Light	= 0.080" pitch
<b>XL</b> = Extra Light	= 0.200" pitch
<b>L</b> = Light	= 0.375" pitch
<b>H</b> = Heavy	= 0.500" pitch

A TL20L075 is a pulley with a 0.375" pitch.

**Width**—The width designation corresponds to the width of the widest belt that can operate in the pulley. It is shown in the last part of the pulley designation and is the width in hundredths of inches.

A TL20L075 is a pulley for use with 3/4" belts.

**NOTE:** The complete pulley designation must be used when ordering a Gates PowerGrip Timing pulley.

**Abbreviations used for pulley bore:** MPB = Minimum Plain Bore.

**Abbreviations used for pulley material:** AL = Aluminum, ST = Steel, SiS = Sintered Steel, GI = Gray Iron, DI = Ductile Iron. Do NOT use sprockets with rim speeds in excess of 6,500 fpm.

**QD Bushings—English Sizes**

**Markets/Applications**

For use with all QD style sheaves, sprockets and pulleys.

**Features/Advantages**

- Made to Precise Tolerances
- Popular Bore Sizes Available

**How to Describe and Order**

Specify quantity required followed by the part number.

**For Example:**

**Quantity**      **Part Number**  
**10**              **E1.3/16**

Bushings with metric bores and keyways are available. Check with Customer Service for sizes and for availability of larger bushings.

**NOTE:** Excessive cap-screw torque can cause sheave and/or bushing to break. Use of lubricants can result in sheave breakage.

## **Discontinued Products**

The Gates Rubber Company takes great pride in offering our customers the very latest in power transmission technology. As we continue to add more advanced offerings to our power transmission products line, some items become outdated and no longer offer the best value to our customers. The following pages contain the products which, although in the process of being phased out, will be available until current stock is depleted.

NOTE: Some pulleys and sprockets listed in these pages may still be available on a Made-To-Order basis. Lead times, minimums and price premiums may apply. Please check with Customer Service for details.
